

**QuantFit**

Econometrics in your pocket

**Tabula Stats**

Publication-ready research outputs

Analyze. Interpret. Publish.

Run serious econometrics, understand the results, build high-quality charts and turn research output into polished tables and reports—without being tied to a desktop.

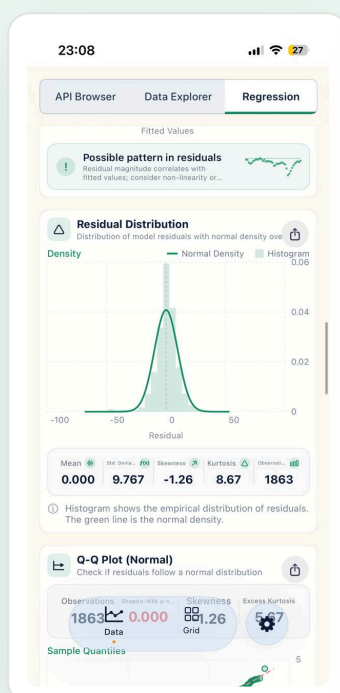

Real app outputs. Real research workflow. Available now on the App Store.

**QuantFit**

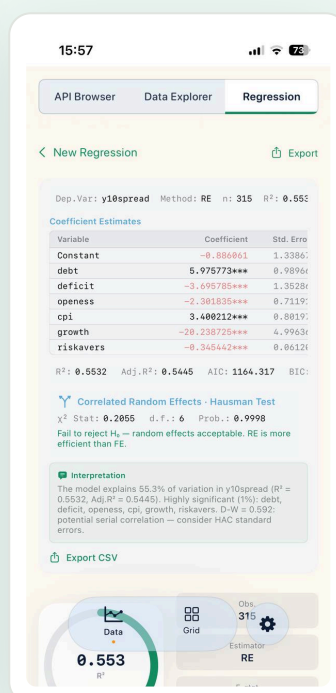

Estimate, diagnose and understand

Econometrics that moves with you.

Bring in economic data, estimate the model, inspect diagnostics and receive an interpreted report that explains the findings—not just a wall of coefficients.

Residual distribution and normality diagnostics

Model results with built-in interpretation

Research-grade estimators

OLS

Fixed Effects

Random Effects

2SLS / IV

ARDL / NARDL

VAR / VECM

PMG / MG / DFE

Dynamic GMM

FMOLS / DOLS / CCR

Data without the usual friction

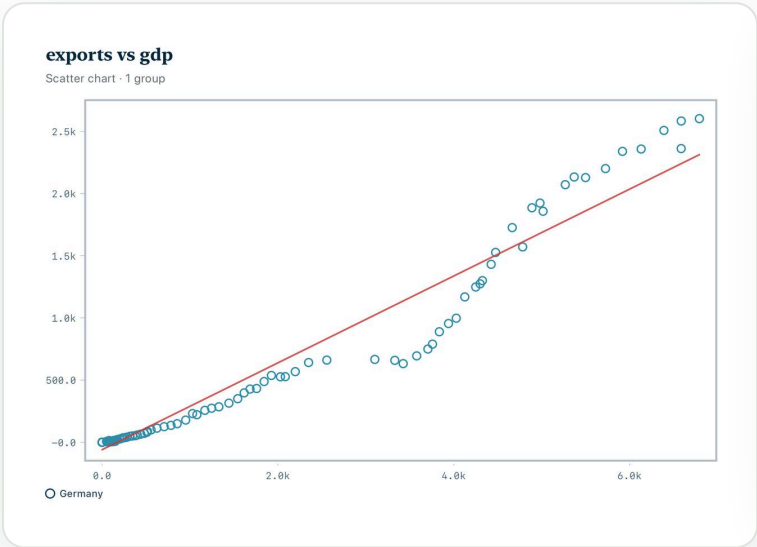

Import CSV or XLSX files, or pull live series from the World Bank, IMF, Penn World Table and FRED.

Reports that interpret the evidence

Review model fit, coefficient meaning, diagnostics and methodological caveats in a structured academic narrative.

High-quality chart and table exports—ready for real work.

Export the results you need for papers, reports, presentations and further analysis. Every visual below is a genuine output from the apps.

Publication-ready scatter plot with fitted relationship

TABLE 1
Fixed Effects Regression of y10spread

Estimator	(1)	(2)
	Fixed Effects (one-way, entity)	Random Effects
debt	6.0458*** (1.0140)	5.9758*** (0.9897)
deficit	-3.6914*** (1.3782)	-3.6958*** (1.3529)
openness	-2.2962*** (0.7357)	-2.3018*** (0.7119)
cpi	3.3452*** (0.8228)	3.4002*** (0.8020)
growth	-20.2957*** (5.0619)	-20.2387*** (4.9964)
riskavars	-0.3465*** (0.0622)	-0.3454*** (0.0612)
Constant	—	-0.8861 (1.3387)
N	315	315
R ²	0.5534	0.5532

Notes: Standard errors in parentheses. * p < 0.1, ** p < 0.05, *** p < 0.01.

Academic regression table with coefficients, standard errors, stars and fit statistics

fast handoff anywhere

Turn raw statistical output into polished research material.

Capture results from Stata, R, SPSS or another package. Rebuild them as academic tables, create charts, work with matrices and equations, then export in the format your document needs.

TABLE 1
ARDL Model Estimation for
D(Y10SPREAD)

(1)

Dep. var.	D(Y10SPREAD)
Estimator	ARDL
LONG RUN COEFFICIENTS	
DEBT	1.3061 [1.1176]
DEFICIT	-4.0009 [5.6002]
CPI	-5.1887*** [1.9372]
GROWTH	-152.8463*** [11.2831]
OPENESS	0.0453 [0.5328]
CRISK	-0.3418*** [0.0609]
C	34.5274*** [6.0131]
SHORT RUN DYNAMICS	
COINTEQ	-0.1899** [0.0831]
D(DEBT)	-9.1100** [4.2857]
D(DEFICIT)	-1.3284 [1.0063]

Formatted ARDL model table

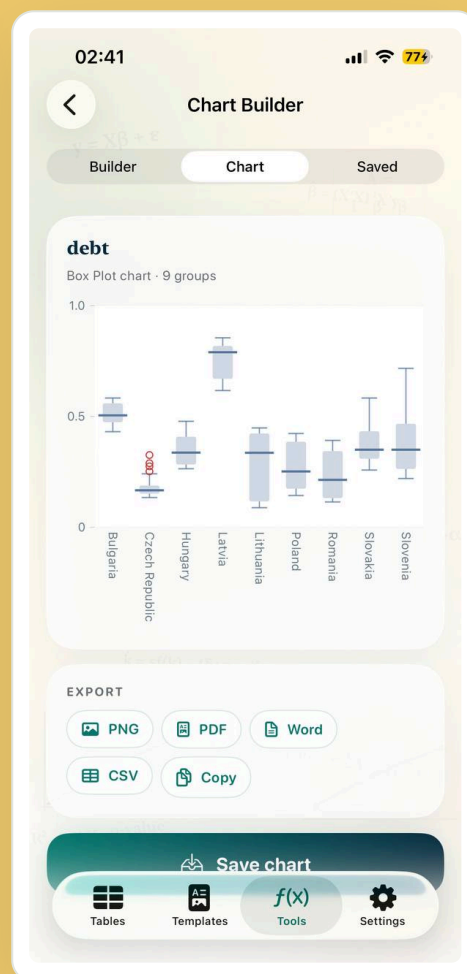

Chart Builder with PNG, PDF, Word and CSV export

Capture

Read output from photos, screenshots and PDFs.

Refine

Choose journal styling, thresholds, charts, matrices and equations.

Export

Send clean work to PNG, PDF, Word, Excel and CSV.

Your time.

Use QuantFit to run and understand the analysis. Use Tabula Stats to finish the presentation. Together they reduce the distance between a research question and a result you can share.

01 · QUANTFIT

Estimate

Load the data and run the appropriate econometric model.

02 · QUANTFIT

Interpret

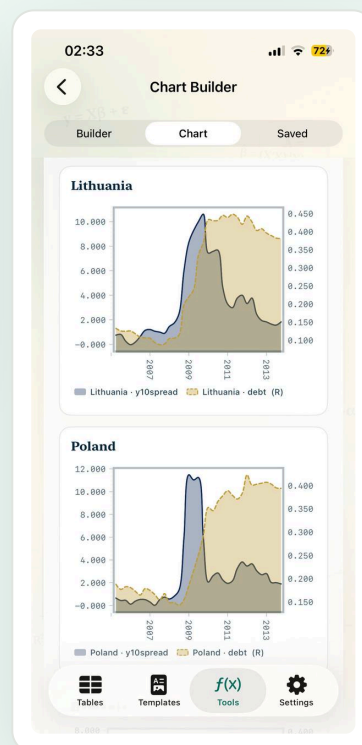

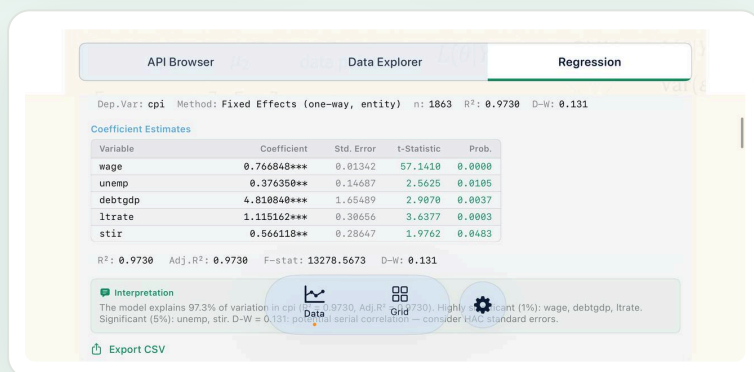

Inspect diagnostics, charts and the structured results report.

03 · TABULA

Publish

Format tables and export charts, documents and data files.

“I use both of these apps in my own work. The amount of time they save is incredible.”

ME · ECONOMIST & INDEPENDENT DEVELOPER

AVAILABLE NOW ON THE APP STORE

Start with the next question.

Download QuantFit and Tabula Stats. Analyze, interpret and publish from one portable research workflow.
